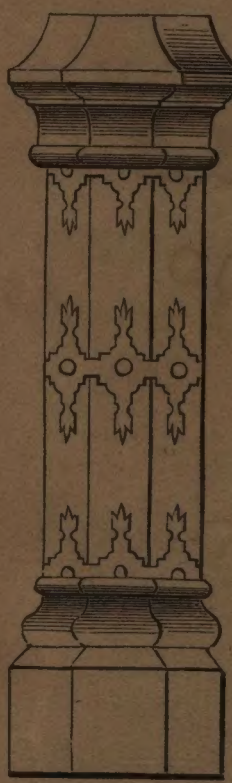
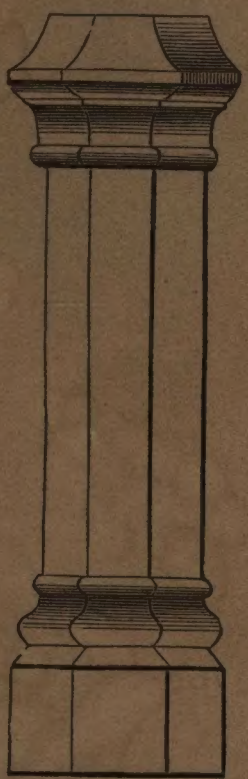
TERRA COTTA ORNAMENTAL CHIMNEY TOPS.

These tops are now very generally used both for city and country houses. They give a style and finish to the cottage or villa that cannot be produced in brick. They secure a good draught to the flue, the circular shaft and cone shaped top, makes an excellent ejector, and no one need fear a smokey chimney, where these tops are used.

No. 1.



6 foot, 6 inches high, - - - - - $20.00



6 foot, 6 inches high, - - - - - $16.00

☞ Made from two foot to eight foot high. We have the largest stock of these tops in the United States, and can ship any quantity at short notice.

☞ Cheap, durable and Ornamental; will stand any climate, and not affected by coal gas or frost.

MINTON'S ENCAUSTIC FLOORING TILE

AND

TESSELATED PAVEMENTS.

On the opposite page we give a few specimens of these ornamented Pavements, now so much used in this country and in Europe. Encaustic Tile are made by the compression of powdered clay and flint, in steel dies, of any geometrical form that may be desired. The color and texture of the Tile is exceedingly durable, and will stand the hardest wear. The color of the Tile is the same throughout, and will retain its original appearance after years of use. They make a very cheap and appropriate floor for

CHURCHES, PUBLIC HALLS, VESTIBULES & CONSERVATORIES.

The great advantage possessed by these Tile, over marble, is cheapness, permanency of color, and great durability. Meeting modern architectural requirements, in combining appropriate design, variety of color, extreme hardness, and consequent durability.

TRANSPORTATION.

The uniform size of these Tile allows them to be packed in a very small space; twelve square feet making one foot square solid, and weighing one hundred and twenty-five pounds. We furnish original designs, when desired, and contract for Tile only, or put down complete.

TESTIMONIAL FROM SIR CHARLES BARRY—LONDON.

I hereby certify that I have made extensive use of Messrs. Minton's Tiles, in the new Palace at Westminster, and that I have reason to entertain the highest opinion of their quality and durability, as well as of their beauty in color, and the fidelity with which the original designs for them have been carried out. The first employment of these tiles was in the floor of the lobby of the House of Lords, in the year 1846; and, in the year 1851, they were employed in the central hall and main thoroughfares of the building; and, although perhaps, not less than 1,500,000 persons have passed over the central portion of those floors, I cannot perceive the slightest abraision of the original surface of the tiles.

(Signed) CHARLES BARRY.

N.B.—The prices marked on the Tile plates are the same as 1860. The prices are the same now, with the addition of the difference of the rate of exchange

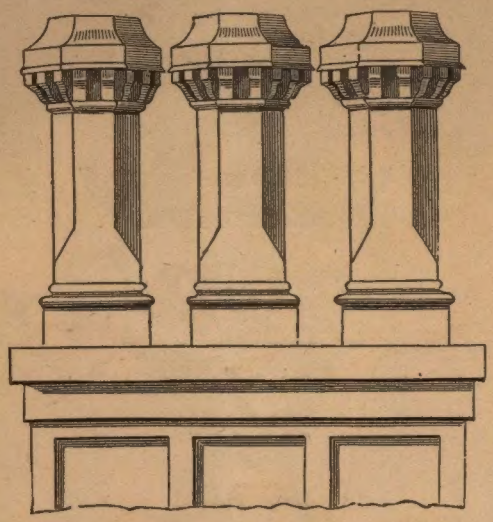
ORNAMENTATION.

A well-proportioned Chimney-top on a Villa or Cottage will give a style and finish in perfect accordance with good taste and architectural effect. In Europe no cottage or villa is considered complete without these tops; and, in all large cities, they are very generally used as a substitute for brick or stone.



VITRIFIED TERRA COTTA CHIMNEY TOPS.

Durability and Economy.

Cost less, in the first place, than brick, and are perfectly impervious to the action of frost or coal-gas, so destructive to brick and plaster. The Circular Shaft and Cone shaped Top secure a perfect draught, and will be found more effective than many of the patent contrivances of the day.

15 " "	. . . . .	.	3 00 "

Bends, Branches and Angles, a price and a half.

Double Branches, J. & S. Traps, and Horizontal Traps. All sizes Horizontal Traps with Clean-out Pipe.

This Pipe is well adapted and very extensively used for City Sewerage and House-Drains, also for conducting water to Mills, Factories, &c, and aqueduct purposes of all kinds

It is perfectly indestructible, lasting for ages, and is superior to and greatly less in cost than any other material.

After an experience of 20 years in the manufacture of this material in Europe and in this country, we are warranted in saying, that our Ware is fully equal, if not superior, to any imported.

TERRA COTTA FLUE PIPE.

This article we have lately introduced for the use of flues, and find their use very generally approved by architects and builders. The material being a non-conductor, it secures the building from danger by fire; and, for Hot Air or Smoke-Flues, it is cheaper and better than Iron or Tin.

ECONOMY.

Flues can be started from second and third stories. The low price at which these Flues are furnished, will add very little to the cost of a building over that of the old-fashioned plan of forming them of brick and mortar, and the advantage gained cannot be estimated in dollars. They only require to be examined to be appreciated.

STUD PARTITIONS AND PARTY WALLS.

They can be used in a 6 inch stud partition, or a 9 inch party wall, without projections, making a great saving of room, and securing, always, a perfect draught.
